

Product Security Support Period

This document describes the cyber security support period for the applicable GeoVision-branded products listed below.

This document applies only to the products expressly listed in the Product List. Products not listed may be subject to separate security support, warranty, end-of-life, or third-party supplier policies. The inclusion of a product in this list does not indicate that the product is currently available for sale.

During the applicable security support period, GeoVision will use commercially reasonable efforts to evaluate validated cyber security vulnerabilities affecting the listed products and, where necessary and technically feasible, make available appropriate security updates, firmware or software fixes, configuration guidance, or other mitigations.

The form, timing, and availability of any remediation may depend on the severity and exploitability of the vulnerability, the affected product architecture, the availability of third-party or supplier support, and other relevant technical or legal considerations.

For each listed product, the cyber security support period ends on the Security Support End Date shown in the Product List below. After the applicable Security Support End Date, GeoVision may discontinue cyber security updates, vulnerability remediation, or other cyber security maintenance for that product, except as otherwise required by applicable law or separately agreed in writing.

This document does not extend or modify any product warranty, general technical support obligation, service-level agreement, sales term, or statutory right.

GeoVision may update this document from time to time, including but not limited to add products, correct product information, or extend a Security Support End Date. Unless required by applicable law, GeoVision does not intend to shorten a published Security Support End Date for a listed product.

Suspected cyber security vulnerabilities may be reported to GeoVision through GeoVision’s published vulnerability reporting contact or cyber security webpage.

Date: July 29, 2026.
